# HR Analytics Dashboard

1,470 employees · Attrition & Performance Analysis

Active workforce reporting

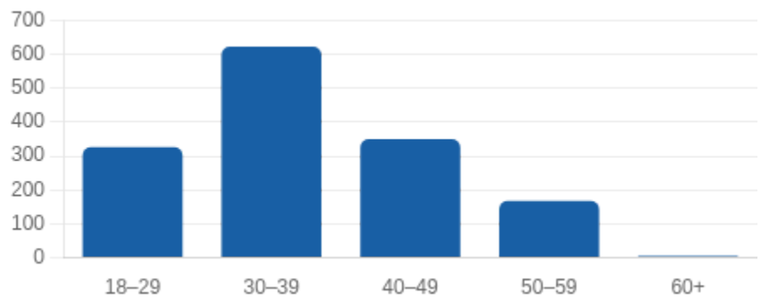
| TOTAL EMPLOYEES | ATTRITION RATE | AVG INCOME (ACTIVE) | OVERTIME EXPOSURE |
|---|---|---|---|
| 1,470 | 16.1% | $6,833 | 28.3% |
| Across 3 departments | 237 employees left | vs $4,787 for leavers | 416 employees on OT |

**Key finding:** Employees who left earned 30% less on average than those who stayed ($4,787 vs $6,833/month). Leavers are also 4 years younger on average (33.6 vs 37.6 yrs). Overtime workers are 3× more likely to leave (31% vs 10% attrition). These three factors — low pay, youth, and overwork — cluster together and require targeted intervention.

## WORKFORCE COMPOSITION

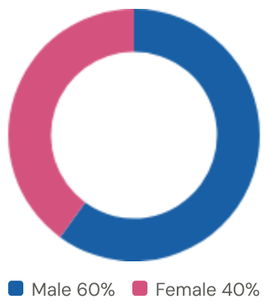
### Employees by age group

Core workforce is 30–39 (42% of staff)



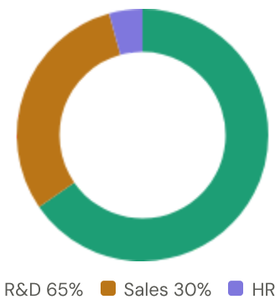
### Gender distribution

Male workforce is 60%, female 40%



### Department breakdown

R&D is the largest department at 65%



## ATTRITION ANALYSIS

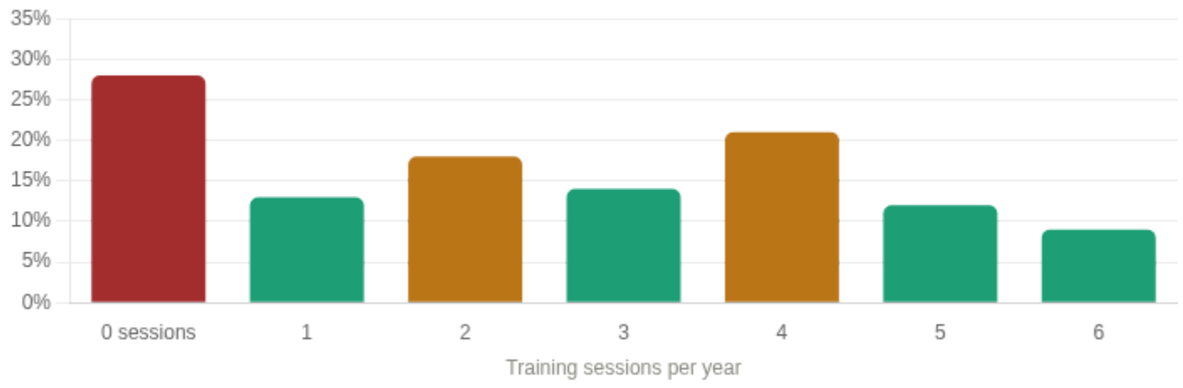
### Attrition rate by key driver

Singles, overtime workers, and level-1 staff show the highest flight risk

Marital status | Overtime | Job level | Department

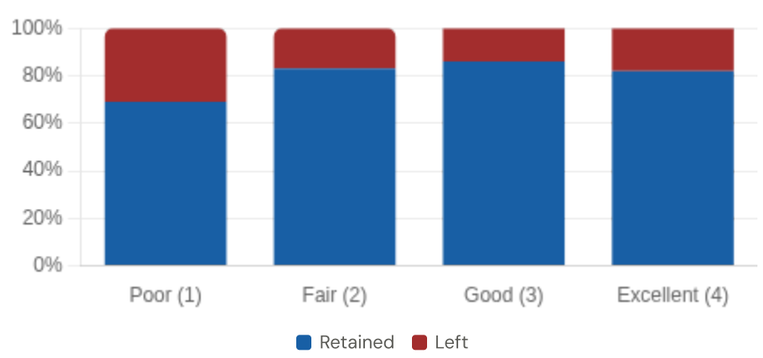
### Attrition by training frequency

Zero training sessions = 28% attrition. Even 1 session cuts risk nearly in half



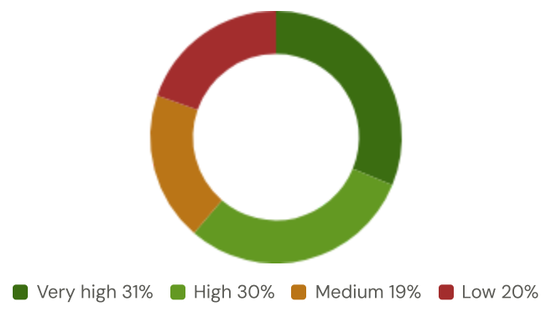
### Attrition vs work-life balance

WLB score 1 (poor) shows the highest attrition at 31%



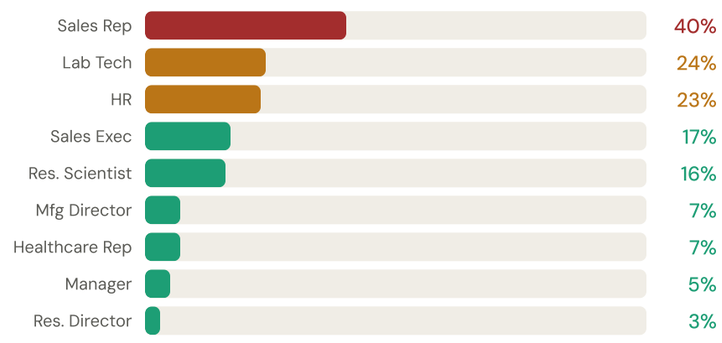
### Job satisfaction distribution

61% report high or very high satisfaction



### Attrition rate by job role

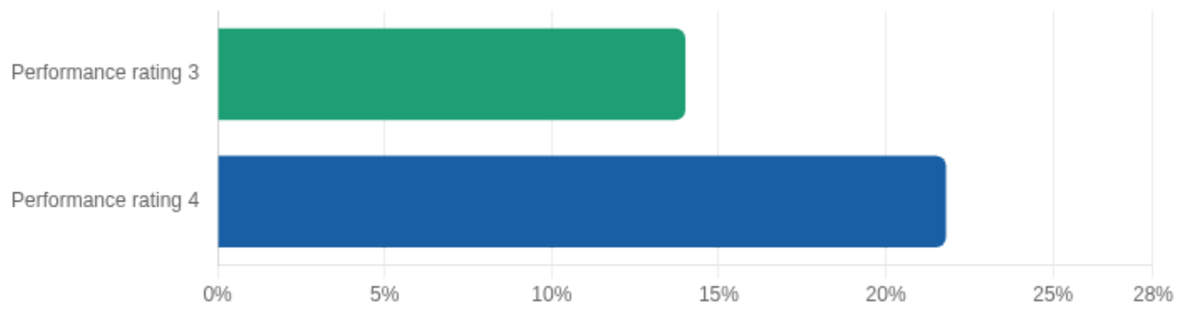
Sales Reps (40%) and Lab Technicians (24%) lead churn across all roles



## PERFORMANCE & COMPENSATION

### Average salary hike by performance rating

Rating 4 earns ~22% hike vs ~14% for rating 3. Only ratings 3 and 4 were recorded

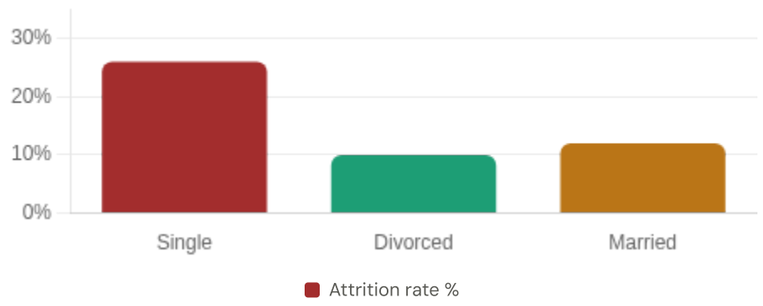


### Monthly income — active vs leaver

A $2,046/month income gap separates those who stayed from those who left

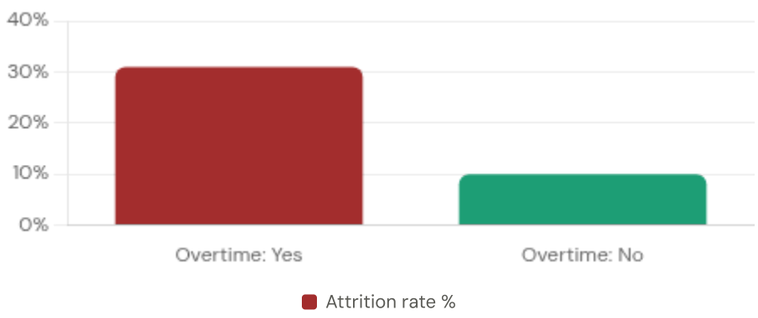
### Attrition by marital status

Single employees leave at more than double the rate of married staff



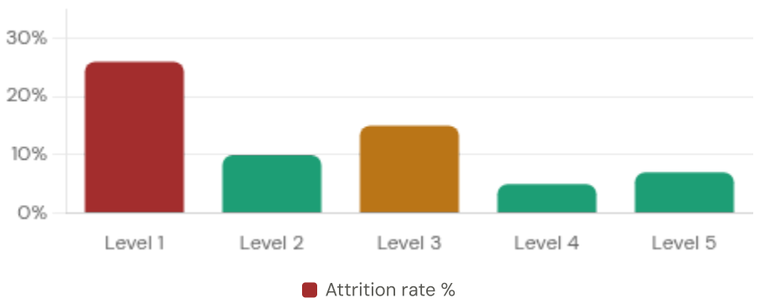
### Attrition: overtime vs no overtime

Overtime workers leave at 3× the rate of regular-hours employees



### Attrition rate by job level

Entry-level (1) has the highest attrition at 26%; senior levels are relatively stable



## RECOMMENDED INTERVENTIONS

▲ HIGH PRIORITY

### Salary review for junior staff

Job Level 1 has 26% attrition. A targeted pay uplift for entry-level roles could directly reduce the 30% income gap between leavers and stayers. Focus first on Sales Representatives and Laboratory Technicians.

▲ HIGH PRIORITY

### Overtime policy reform

Overtime workers leave at 31% vs 10% — a 3× multiplier. Introduce caps, comp-time, or rotation schedules, particularly in Sales and R&D where overtime concentration is highest.

▶ MEDIUM PRIORITY

### Mandatory training minimum

Employees with zero training have a 28% attrition rate vs 10–18% for trained peers. Even a single session meaningfully cuts risk. Set a mandatory floor of at least 2 sessions per year organisation-wide.

▶ MEDIUM PRIORITY

### Engagement programs for singles

Single employees show 26% attrition vs 12% for married staff. Mentorship programs, peer social groups, and flexible benefits tailored to younger employees may improve retention in this cohort.

• MONITOR

### Sales Representative pipeline

40% attrition in Sales Reps is alarming. Investigate commission structures, territory load, and career path clarity. Systematic exit interviews should be implemented immediately for this role.

• MONITOR

### Promotion velocity audit

Low job satisfaction (20% of workforce) and stagnant role tenure likely compound pay dissatisfaction. Review promotion timelines and internal mobility pathways, especially for Level 1–2 employees.
